6.5.1. Scaling evolutionary algorithms
6.5.2. Parallel vs. serial processing
6.5.3. Scaling efficiency
6.5.4. Communicating between nodes
6.5.5. Scaling linearly
6.5.6. Scaling gradient-based approaches
Summary
Chapter 7. Distributional DQN: Getting the full story
7.1. What's wrong with Q-learning?
7.2. Probability and statistics revisited
7.2.1. Priors and posteriors
7.2.2. Expectation and variance
7.3. The Bellman equation
7.3.1. The distributional Bellman equation
7.4. Distributional Q-learning
7.4.1. Representing a probability distribution in Python
7.4.2. Implementing the Dist-DQN
7.5. Comparing probability distributions
7.6. Dist-DQN on simulated data
7.7. Using distributional Q-learning to play Freeway
Summary
Chapter 8. Curiosity-driven exploration
8.1. Tackling sparse rewards with predictive coding
8.2. Inverse dynamics prediction
