 [' ' ' ' 'P' ' ' ']
 [' ' ' ' ' ' ' ']]
Move #: 3; Taking action: l
[['+' '-' ' ' ' ' ']
 [' ' 'W' ' ' ' ' ']
 [' ' 'P' ' ' ' ' ']
 [' ' ' ' ' ' ' ']]
Move #: 4; Taking action: l
[['+' '-' ' ' ' ' ']
 [' ' 'W' ' ' ' ' ']
 ['P' ' ' ' ' ' ']
 [' ' ' ' ' ' ' ']]
Move #: 5; Taking action: u
[['+' '-' ' ' ' ' ']
 ['P' 'W' ' ' ' ' ']
 [' ' ' ' ' ' ' ']
 [' ' ' ' ' ' ' ']]
Move #: 6; Taking action: u
[['+' '-' ' ' ' ' ']
 [' ' 'W' ' ' ' ' ']
 [' ' ' ' ' ' ' ']
 [' ' ' ' ' ' ' ']]
Reward: 10
```

Can we get a round of applause for our Gridworld player here? Clearly it knows what it’s doing; it went straight for the goal!

But let’s not get too excited; that was the static version of the game, which is really easy. If you use our test function with `mode='random'`, you’ll find some disappointment:

```
>>> testModel(model, 'random')
Initial State:
[[' ' '+' ' ' 'P']
 [' ' 'W' ' ' ' ']
 [' ' ' ' ' ' ' ']
 [' ' ' ' '-' ' ']]
Move #: 0; Taking action: d
[[' ' '+' ' ' ' ']
 [' ' 'W' ' ' 'P']
```
