10.3.3. Tensor contractions and Einstein notation
10.3.4. Training the relational module
10.4. Multi-head attention and relational DQN
10.5. Double Q-learning
10.6. Training and attention visualization
10.6.1. Maximum entropy learning
10.6.2. Curriculum learning
10.6.3. Visualizing attention weights
Summary
Chapter 11. In conclusion: A review and roadmap
11.1. What did we learn?
11.2. The uncharted topics in deep reinforcement learning
11.2.1. Prioritized experience replay
11.2.2. Proximal policy optimization (PPO)
11.2.3. Hierarchical reinforcement learning and the options framework
11.2.4. Model-based planning
11.2.5. Monte Carlo tree search (MCTS)
11.3. The end
Appendix. Mathematics, deep learning, PyTorch
A.1. Linear algebra
A.2. Calculus
A.3. Deep learning
A.4. PyTorch
