be utilizing OpenAI's Gym (mentioned earlier) to train our algorithms to understand nonlinear dynamics, control robots and play games (figure 1.15).

Figure 1.15. A depiction of a Go board, an ancient Chinese game that Google DeepMind used as a testbed for its AlphaGo reinforcement learning algorithm. Professional Go player Lee Sedol only won one game out of five, marking a turning point for reinforcement learning, as Go was long thought to be impervious to the kind of algorithmic reasoning that chess is subject to. In each chapter, we will open with a major problem or project that we will use to illustrate the important concepts and skills for that chapter. As each
