rectified linear units (ReLU), 2nd, 3rd, 4th, 5th, 6th, 7th
recurrent neural networks (RNNs), 2nd, 3rd, 4th
reduce function
regression
regularized models
REINFORCE algorithm, 2nd, 3rd
  agents interacting with environment
  creating policy networks
  full training loop
  training models
    backpropagating
    calculating future rewards
    calculating probability of actions
    loss function
reinforcement learning, 2nd
  deep reinforcement learning, 2nd
  dynamic programming versus Monte Carlo
  framework for
  future of
  hierarchical
  multi-agent
    1D Ising model
    2D Ising model
    mean field Q-learning
    mixed cooperative-competitive games
    neighborhood Q-learning
  string diagrams
  uses for
reinforcement of actions, 2nd
relational block
relational DQN
relational models
  double Q-learning
  machine learning interpretability with biases
    equivariance
    invariance
