List of Listings

Chapter 2. Modeling reinforcement learning problems: Markov decision processes

- Listing 2.1. Finding the best actions given the expected rewards in Python 3
- Listing 2.2. Epsilon-greedy strategy for action selection
- Listing 2.3. Defining the reward function
- Listing 2.4. Updating the reward record
- Listing 2.5. Computing the best action
- Listing 2.6. Solving the n-armed bandit
- Listing 2.7. The softmax function
- Listing 2.8. Softmax action-selection for the n-armed bandit
- Listing 2.9. Contextual bandit environment
- Listing 2.10. The main training loop

Chapter 3. Predicting the best states and actions: Deep Q-networks

- Listing 3.1. Creating a Gridworld game
- Listing 3.2. Neural network Q function
- Listing 3.3. Q-learning: Main training loop
- Listing 3.4. Testing the Q-network
- Listing 3.5. DQN with experience replay
- Listing 3.6. Testing the performance with experience replay
- Listing 3.7. Target network
- Listing 3.8. DQN with experience replay and target network

Chapter 4. Learning to pick the best policy: Policy gradient methods
