Listing 4.1. Listing the OpenAI Gym environments
Listing 4.2. Creating an environment in OpenAI Gym
Listing 4.3. Taking an action in CartPole
Listing 4.4. Setting up the policy network
Listing 4.5. Using the policy network to sample an action
Listing 4.6. Computing the discounted rewards
Listing 4.7. Defining the loss function
Listing 4.8. The REINFORCE training loop

Chapter 5. Tackling more complex problems with actor-critic methods

Listing 5.1. Introduction to multiprocessing
Listing 5.2. Manually starting individual processes
Listing 5.3. Pseudocode for online advantage actor-critic
Listing 5.4. CartPole actor-critic model
Listing 5.5. Distributing the training
Listing 5.6. The main training loop
Listing 5.7. Running an episode
Listing 5.8. Computing and minimizing the loss
Listing 5.9. N-step training with CartPole
Listing 5.10. Returns with and without bootstrapping

Chapter 6. Alternative optimization methods: Evolutionary algorithms

Listing 6.1. Evolving strings: set up random strings
Listing 6.2. Evolving strings: recombine and mutate
Listing 6.3. Evolving strings: evaluate individuals and create new generation
Listing 6.4. Evolving strings: putting it all together
Listing 6.5. Defining an agent
