Listing 6.6. Unpacking a parameter vector
Listing 6.7. Spawning a population
Listing 6.8. Genetic recombination
Listing 6.9. Mutating the parameter vectors
Listing 6.10. Testing each agent in the environment
Listing 6.11. Evaluate all the agents in the population
Listing 6.12. Creating the next generation
Listing 6.13. Training the models
Listing 6.14. Setting the random seed

Chapter 7. Distributional DQN: Getting the full story

Listing 7.1. Setting up a discrete probability distribution in numpy
Listing 7.2. Updating a probability distribution
Listing 7.3. Redistributing probability mass after a single observation
Listing 7.4. Redistributing probability mass with a sequence of observations
Listing 7.5. Decreased variance with sequence of same reward
Listing 7.6. The Dist-DQN
Listing 7.7. Computing the target distribution
Listing 7.8. The cross-entropy loss function
Listing 7.9. Testing with simulated data
Listing 7.10. Dist-DQN training on synthetic data
Listing 7.11. Visualizing the learned action-value distributions
Listing 7.12. Preprocessing states and selecting actions
Listing 7.13. Dist-DQN plays Freeway, preliminaries
Listing 7.14. The main training loop

Chapter 8. Curiosity-driven exploration
