2.2.2. Epsilon-greedy strategy
2.2.3. Softmax selection policy
2.3. Applying bandits to optimize ad placements
2.3.1. Contextual bandits
2.3.2. States, actions, rewards
2.4. Building networks with PyTorch
2.4.1. Automatic differentiation
2.4.2. Building Models
2.5. Solving contextual bandits
2.6. The Markov property
2.7. Predicting future rewards: Value and policy functions
2.7.1. Policy functions
2.7.2. Optimal policy
2.7.3. Value functions
Summary
Chapter 3. Predicting the best states and actions: Deep Q-networks
3.1. The Q function
3.2. Navigating with Q-learning
3.2.1. What is Q-learning?
3.2.2. Tackling Gridworld
3.2.3. Hyperparameters
3.2.4. Discount factor
3.2.5. Building the network
3.2.6. Introducing the Gridworld game engine
3.2.7. A neural network as the Q function
