5 Django Admin

This chapter covers

- Using the Django Admin to manage your `Model` content
- Creating a superuser
- Customizing the Django Admin
- Linking between `Model` objects in the Django Admin
- `Model Meta` properties

This chapter covers the Django Admin, a built-in, web-based tool for managing your object relational mapping (ORM) `Model` objects. The Django Admin gives you screens to list, add, edit, and delete the objects in the database.

5.1 Touring the Django Admin

In the previous chapter, you learned how to use the ORM to add storage capabilities to your Django site. Along the way, you used two techniques to construct data: the `.create()` method on a `Model` object and fixtures. Wouldn't it be nice if you had a graphical interface to manage your objects? Django comes with a tool that
