I'll tell you a secret: I was a little naughty when selecting my password. Django has a set of rules for password strength, but the `createsuperuser` command allows you to ignore them. It prompts to confirm you're OK with being naughty, and then it lets you proceed.

> **WARNING** When running a production site, you must guard access to the account that hosts your Django project. Anyone who can run commands can create a user with admin permissions and then will have full access to your site. With your newly created admin user in hand, you can now visit the Django Admin web interface.

5.1.2 The default Django Admin

If you were paying close attention, you might have noticed that the default `INSTALLED_APPS` configuration setting includes an app called `django.contrib.admin`. Likewise, the default main urls.py file also registers a `path` object for `admin/`. The Django Admin web interface is ready to go out of the box. If you don't want the Django Admin, you can remove it by modifying those two files.

As the Django Admin is already configured, and you created an admin user, you can visit it by running the development server and going to http://localhost:8000/admin/. The page prompts you with a login screen.

I'm quite certain you've seen a login page before, and hopefully, know just what to do. Use the username and password you gave to the `createsuperuser` command, and authenticate to the Django Admin.

Once inside, you will see the home page, which shows you all the objects registered with the Django Admin, grouped by their app. As you haven't registered any `Model` files yet, you see the two defaults: *Users* and *Groups*, as in figure 5.2.

You can explore these links if you like, but a later chapter deals with managing users and will cover this information in more detail. If you click the Users link, you will see a list of all your users, which, at the moment, is just the newly created admin account. If you are exploring, you can always get back to the home page by clicking the "Django administration" logo in the top-left corner. The right side of the page mentions actions, which include changes made to objects recently. As you haven't
