```
    content = f"""
        <h1>Musician Page: {musician.last_name}</h1>
    """
    data = {
        'title': 'Musician Restricted',
        'content': content,
    }

    return render(request, "general.html", data)
```

You can start out your testing by trying the negative case: log in as Nicky, and then try to view any Musician. Visiting http://localhost:8000/bands/musician_restricted/1/ results in a `404` error, as Nicky is not Steve Vai, nor is she in his band.

To try the positive case, you need to make some changes to Nicky in the Django Admin. Log out of Nicky, and then log in to the Django Admin. Use the Admin to perform the following steps:

1. Add a new Musician object for Nicky (first name: Nicky, last name: Cousin, date of birth: 2001-01-13).
2. Edit Nicky's user account, and add the association for the newly created Musician object.
3. Edit the Wishful Thinking Band object, adding Nicky's Musician object as a member.

Once you've performed these steps, log out of the Django Admin, and then log back in as Nicky. Now, when you visit http://localhost:8000/bands/musician_restricted/1/, you can see Steve Vai's page. Try visiting using Jimi Hendrix (id = 4), instead. As Jimi isn't part of Wishful Thinking, you should, once again, see a `404` page.

6.4.1 Handling logouts

Before Django 5.0, logging the user out was fairly simple: there was a Logout link you could embed in your HTML. For security reasons, "simple" was deprecated in Django 4.1, and as of Django 5.0, you now need to have a logout form. Chapter 7 describes forms in detail, but waiting until then means you'd have to constantly be logging into the Django Admin just to log out.

It is common practice to have a header with the user's info and frequent actions at the top of your site's pages. Let's go on a bit of a tangent and build such a header, including a logout action. The following listing contains the code you need to add to RiffMates/templates/base.html to include Login and Logout links, depending on the user's state.

Listing 6.7 Something approximating a nav bar

```
<!-- RiffMates/templates/base.html -->
<!-- ... -->
<body>
```
