(you'll learn this spell later). Create RiffMates/templates/registration/password_reset_form.html with the contents from the following listing.

Listing 6.9 Form asking for the user's email to send them a reset link

```
<!-- RiffMates/templates/registration/password_reset_form.html -->
{% extends "base.html" %}

{% block content %}
<p>
  Forgotten your password? Enter your email address below, and we'll
  email instructions for setting a new one.

</p>

<form method="post">
  {% csrf_token %}
  {{ form.as_p }}

  <input type="submit" value="Reset Password">
</form>
{% endblock content %}
```

Renders the form's <input> tags

A submit button for the form

Filling this form starts the password reset process. Whatever the user submits, they get the same message. In olden times, websites would sometimes include helpful information like *we have no such email address*, but that is considered a security flaw. You're exposing to the black hats some information about accounts in your system. The more secure approach is to do the same thing regardless of whether the email matches an account in the system.

6.6.2 Password reset email

The message shown after submitting the reset form is stored in a template called password_reset_done.html. Create a new file in the registration directory with the others. Sample content is provided in the following listing.

Listing 6.10 Message shown after a reset has been requested

```
{% extends "base.html" %}

{% block content %}

<p>
  We've emailed you instructions for setting your password, if an
  account exists with the email you entered. You should receive them
  shortly.

</p>

<p>
  If you don't receive an email, please make sure you've entered the
  address you registered with and check your spam folder.
```
