```
        labels = {
            "seeking": 'I am seeking a'
        }
```

7.2.4 Using SeekingAdForm in a view

For the sake of completeness, let's write out the view and templates for the classified submission. You need two views: one that handles the form and one to redirect the user to when the form is complete. The latter can be the classified ad listing page. The listing page can be public, but the form submission view should be restricted to users.

Recall that the `date` and `owner` fields from the `SeekingAd` model are not included in the form. The `date` field's exclusion is OK because the `auto_now_add` attribute populates it automatically the first time the model gets saved. The `owner` field gets excluded, as this isn't something the user should be filling in. The owner field should be populated by the view, ensuring the value contains the user that created the ad.

Let's start with the classifieds listing page. It is a short view that contains two pieces of data: all of the ads for musicians seeking bands and all the ads for bands seeking musicians. Both of these are queries on the `SeekingAd` class but with different `.filter()` parameters. The following listing contains code for RiffMates/content/views.py.

Listing 7.8 View for listing the classified ads

```
# RiffMates/content/views.py
...
from content.models import MusicianBandChoice, SeekingAd
...
def list_ads(request):
    data = {
        'seeking_musician':SeekingAd.objects.filter(
            seeking=MusicianBandChoice.MUSICIAN),
        'seeking_band':SeekingAd.objects.filter(
            seeking=MusicianBandChoice.BAND),
    }

    return render(request, "list_ads.html", data)
```

Band-seeking-musician query

Musician-seeking-band query

Don't forget to add a `path` object to RiffMates/content/urls.py to register this view, and make sure you name the URL, so it can be used in a `redirect()` call in the form view. The following listing contains a simple template for this view. Create RiffMates/templates/list_ads.html, and add the code there.

Listing 7.9 Template for the classified listing page

```
<!-- RiffMates/templates/list_ads.html -->
{% extends "base.html" %}

{% block content %}
```
