{% endblock content %}
```

Loop through the ads for musicians seeking bands.

Show the ad date and the name of the seeking musician.

Text content of the ad

Alternate text copy if there are no ads in the query

Similar structure for bands seeking musicians

When playing with `SeekingAd` in the Django Admin before, you likely created one or more ads. If you did, you should be able to see them in your new view. Figure 7.5 shows my version of the content with an ad from Nicky.

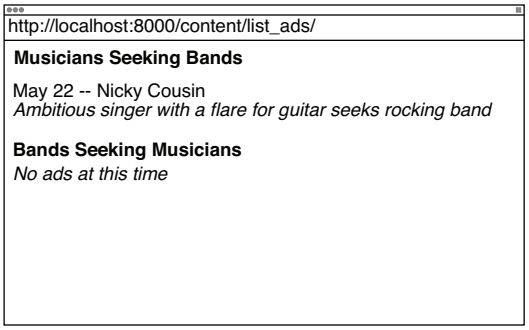

Figure 7.5 The ad listing page with a single lonely ad

The view for submitting an ad is similar to the view you wrote to submit comments earlier. The only thing you need to learn when using the `SeekingAdForm` is how to create the corresponding `SeekingAd` model object. Once you have verified that the form is valid, you call `.save()` on the form to get an instance of the corresponding model. The `.save()` method on a `ModelForm` has an optional parameter `commit`, which determines whether the returned instance object gets saved or not.
