

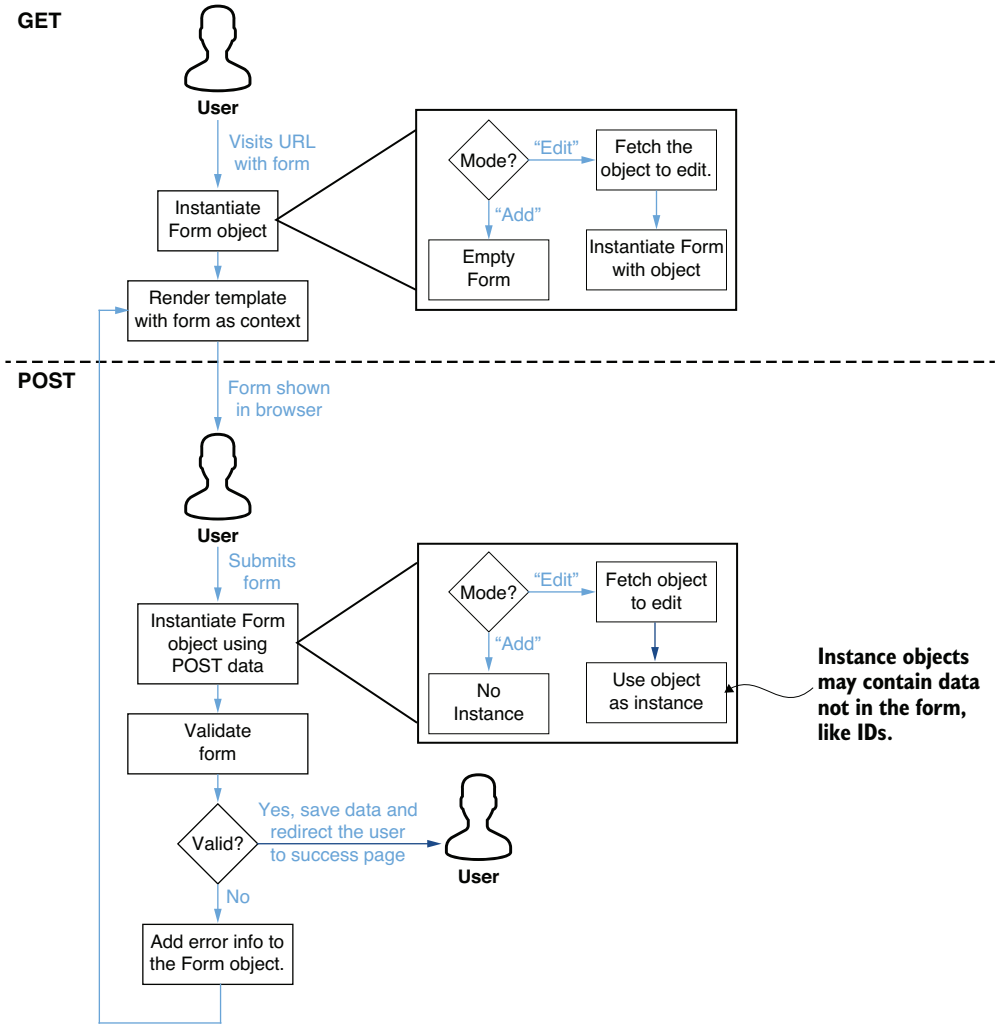

Figure 7.6 Prepopulating the form with an existing object for Edit mode

Listing 7.12 View for displaying and submitting `SeekingAdForm`

```
# RiffMates/content/views.py
...
from django.shortcuts import render, redirect, get_object_or_404
...
@login_required
def seeking_ad(request, ad_id=0):
    if request.method == 'GET':
        if ad_id == 0:
            form = SeekingAdForm()
        else:
```

The view now takes the ID of a model object to edit as an argument.

An ID of 0 indicates a new model object should be created.
