for the description and an `ImageField` for the picture. The following listing contains the new fields to be added inside the `Venue` model within RiffMates/bands/models.py.

Listing 7.16 Adding description and picture fields to the `Venue` model

```
# RiffMates/bands/models.py
...
class Venue(models.Model):
    name = models.CharField(max_length=20)
    description = models.TextField(blank=True)
    picture = models.ImageField(blank=True, null=True)
    ...
```

A new description field, which can be empty in the Django Admin (blank=True)

A new picture field, which can be NULL in the database and empty in the Django Admin

These changes impact the database: two new columns need to be added to the `Venue` model's corresponding table. Run the `makemigrations` and `migrate` management commands to update the database.

> **NOTE** If you forgot to install Pillow, don't worry. Django will remind you when you attempt to make a migration that has an `ImageField`.

Once that's done, you're set to go, since you've already got an Admin class for the Venue. Run the development server, go to the Django Admin, and edit a Venue. You'll now get `description` and `picture` fields, like in figure 7.8.
