```
(venv) RiffMates$ python manage.py flush

You have requested a flush of the database.

This will IRREVERSIBLY DESTROY all data currently in the
"RiffMates/db.sqlite3" database, and return each table to
an empty state.

Are you sure you want to do this?

    Type 'yes' to continue, or 'no' to cancel: yes
```

Before knowing about `flush`, I accomplished the same thing by removing the database file and running migrations once again. Using `flush` instead allows you to skip the second step.

There are times when `flush` isn't good enough, though. If you haven't released anything into production yet, there isn't much value in maintaining every step it took to get to your current state. Often, with a new project, I wipe the database as well as all the migration folders and create a new "initial" state based on my current Models. Once something has been released in production, you can't do this anymore: you need to track all changes, so they can be applied to the production system.

9.1.5 SQL commands

The ORM is a beautiful thing; it saves you from writing a lot of SQL. Abstractions can be dangerous, though, and there are times when you want to know what is happening underneath. There are two management commands that help you peek under the covers: `sqlflush` and `sqlmigrate`. These commands correspond to the `flush` and `migrate` commands but print out the equivalent SQL. The `sqlflush` management command doesn't require any arguments:

```
(venv) RiffMates$ python manage.py sqlflush
BEGIN;
DELETE FROM "bands_band_musicians";
DELETE FROM "django_session";
DELETE FROM "bands_room";
DELETE FROM "content_seekingad";
DELETE FROM "auth_group_permissions";
DELETE FROM "auth_user_user_permissions";
DELETE FROM "bands_musician";
DELETE FROM "auth_group";
DELETE FROM "auth_user_groups";
DELETE FROM "bands_userprofile";
DELETE FROM "bands_userprofile_venues_controlled";
DELETE FROM "bands_venue";
DELETE FROM "django_admin_log";
DELETE FROM "bands_userprofile_musician_profiles";
DELETE FROM "auth_user";
DELETE FROM "auth_permission";
DELETE FROM "bands_band";
DELETE FROM "django_content_type";
```
