```
    musicians = Musician.objects.all()
    if options['last_name']:
        musicians = musicians.filter(
            last_name__gte=options["last_name"]
        )

    if options['first_name']:
        musicians = musicians.filter(
            first_name__gte=options["first_name"]
        )

    if options['birth']:
        try:
            birth = datetime.strptime(
                options["birth"], "%Y-%m-%d"
            )
        except ValueError:
            raise CommandError(
                "Birth date must be provided in YYYY-MM-DD format")

        musicians = musicians.filter(birth__gte=birth)

    for musician in musicians:
        self.stdout.write(
            f"{musician.last_name}, {musician.first_name} "
            f"({musician.birth})"
        )
```

If the --last_name flag gets used, options["last_name"] contains the flag's value; otherwise, it is None.

Start by querying all Musician objects.

Filter the query set, using all names greater than or equal to the --last_name flag's value.

Filter based on the --first_name flag.

Parse the --birth value as year-month-day into a datetime object to be used in the filter.

If parsing the date results in an error, catch the error and raise a CommandError instead; the output is friendlier than a stack trace.

Loop through the query set result after all filters have been applied, and then write each musician value using self.stdout.write().

With the code in place, it is time to test out your command. Here are some possible tests you can run:

```
(venv) RiffMates$ python manage.py musicians
Bonham, John (1948-07-31)
Cousin, Nicky (2000-01-13)
Hendrix, Jimi (1942-11-27)
Lennon, John (1940-10-09)
Star, Ringo (1942-11-27)
Vai, Steve (1960-06-06)
(venv) RiffMates$ python manage.py musicians
➥ --last_name Loblaw
Star, Ringo (1942-11-27)
Vai, Steve (1960-06-06)
(venv) RiffMates$ python manage.py musicians --first_name J
Bonham, John (1948-07-31)
Cousin, Nicky (2000-01-13)
Hendrix, Jimi (1942-11-27)
Lennon, John (1940-10-09)
Star, Ringo (1942-11-27)
Vai, Steve (1960-06-06)
(venv) RiffMates$ python manage.py musicians --first_name O
➥ --last_name B
Star, Ringo (1942-11-27)
Vai, Steve (1960-06-06)
```

Command-line flags are optional; without any, the management command runs no further filters and outputs all musicians.

A greater-than-or-equal filter can be a full string or a single letter.

Flags can be combined. Although all musicians have a last name of B or greater, the first name restriction of O whittles the results down to just two. The filters are implemented as an AND condition.
