```
(venv) RiffMates$ python manage.py musicians
➥ --birth 1950-01-30
Cousin, Nicky (2000-01-13)
Vai, Steve (1960-06-06)
(venv) RiffMates$ python manage.py musicians
➥ --birth tomorrow
CommandError: Birth date must be provided in YYYY-MM-DD format
```

Filtering based on a date in year-month-day format

datetime can't parse tomorrow, so a CommandError is raised; this is more user friendly than a stack trace.

9.3.1 Built-in arguments

Now that you've added flags to the `musician` management command, the help screen has more stuff in it:

```
(venv) RiffMates$ python manage.py musicians --help
usage: manage.py musicians [-h] [--last_name LAST_NAME]
                           [--first_name FIRST_NAME] [--birth BIRTH]
                           [--version] [-v {0,1,2,3}]
                           [--settings SETTINGS] [--pythonpath PYTHONPATH]
                           [--traceback] [--no-color] [--force-color]
                           [--skip-checks]

    Lists registered musicians

options:
  -h, --help            show this help message and exit
  --last_name LAST_NAME, -l LAST_NAME
                        Query musicians whose last name is greater than or
                        equal to this value. Note this is case-sensitive.
  --first_name FIRST_NAME, -f FIRST_NAME
                        Query musicians whose first name is greater than
                        or equal to this value. Note this is case-sensitive.
  --birth BIRTH, -b BIRTH
                        Query musicians whose birth date is greater than
                        or equal to this value. Date must be given in
                        YYYY-MM-DD format.
  --version             Show program's version number and exit.
  -v {0,1,2,3}, --verbosity {0,1,2,3}
                        Verbosity level; 0=minimal output, 1=normal
                        output, 2=verbose output, 3=very verbose output
  --settings SETTINGS   The Python path to a settings module, e.g.
                        "myproject.settings.main". If this isn't provided,
                        the DJANGO_SETTINGS_MODULE environment variable
                        will be used.
  --pythonpath PYTHONPATH
                        A directory to add to the Python path, e.g.
                        "/home/djangoprojects/myproject".
  --traceback           Raise on CommandError exceptions.
  --no-color            Don't colorize the command output.
  --force-color         Force colorization of the command output.
  --skip-checks         Skip system checks.
```

The main help string gets set by the help attribute of your command class.

The help content for the --last_name flag based on the help parameter to .add_argument() and the flags for first name and birth date following it.

The --help flag gets created for you.

As before, your command class's `help` attribute is the main help message, but now, each flag you defined shows in the message as well. Django also provides a few more flags by default.
