12 Making your pages more dynamic with HTMX

This chapter covers

- Using HTMX to add on-page interactivity to your Django project
- Lazy loading
- Search-as-you-type
- Infinite scroll
- Click to edit

On its own, Django is structured for older-style web interactions, with each action causing a new page to be loaded. Modern web frameworks, like React and Angular, can be used on top of an API, but the HTMX library allows for a high degree of interactivity without a lot of additional JavaScript code.

12.1 Dynamic web pages

Django was created in a time when there was a one-to-one relationship between a URL and a web page. Web pages were relatively static, with JavaScript mostly used to snazz the page up a little, by highlighting the current page in the nav or doing a
