13 Django power tools

This chapter covers

- Django Debug Toolbar
- General-utility libraries
- Django Admin beautification
- Prettier forms
- Favicons
- Feature flags
- Generating static sites

One of Python's mantras is *batteries included*, meaning the language should include everything you need to build your project. Ironically, Python has an incredibly rich ecosystem of add-ons. The batteries may be included, but there is a pretty big battery store with all sorts of variety. Django embraces this same attitude: the framework contains everything you need to build a website. Like with Python, Django has plenty of third-party tools to make your life easier. This chapter covers a few of the libraries I just can't live without. Before writing any kind of code, you should always check https://djangopackages.org/ to see if someone else has done it for you.
