Table C.4 Loadable Django filters

Filter	Module	Description
`{{ value|naturalday }}`	humanize	This converts a date into `today`, `yesterday`, or `tomorrow` if applicable; otherwise, it returns the date, using the same format as the `{% date %}` tag.
`{{ value|naturaltime }}`	humanize	This converts a datetime object into a natural string. Possible results include `now`, `29 seconds ago`, and `1 week, 2 days from now`. It uses the `|timesince` format if no conversion is possible.
`{{ value|ordinal }}`	humanize	This converts an integer into its ordinal text equivalent. For example, `1` becomes `1st`, `2` becomes `2nd`, and so on.
`{{ LANGUAGE_CODE|language_name }}`	i18n	This returns the name of the language for the filtered language code—for example, `German`.
`{{ LANGUAGE_CODE|language_name_local }}`	i18n	This returns the name of the language in its own language for the filtered language code—for example, `Deutsch`.
`{{ LANGUAGE_CODE|language_bidi }}`	i18n	This returns `True` for right-to-left languages and `False` otherwise.
`{{ LANGUAGE_CODE|language_name_translated }}`	i18n	The name of this language is displayed in the currently active language.
`{{ value|localize }}`	l10n	Forces localization on a single value.
`{{ value|unlocalize }}`	l10n	This disables localization on a single value.
`{{ value|localtime }}`	tz	This forces conversion of `value` into the local timezone.
`{{ value|timezone:"America/Toronto" }}`	tz	This forces conversion of `value` into the named timezone.
`{{ value|utc }}`	tz	This forces conversion of `value` into UTC.
